# IntegriBlend 80/20 CS & IntegriBlend 70/30 CS

GMCO CS products are a blend of liquid magnesium chloride and a Complex Sugar. It's an all-natural, environmentally friendly solution for gravel road stabilization and dust control. GMCO CS blends are eco-friendly, but it's also budget smart. Studies show that entities using our CS blends as part of their gravel road maintenance can cut up to 60% of their gravel replacement and blading costs. The CS's hygroscopic properties naturally capture moisture from the air keeping the road damp and dust-free for a healthier environment and a safer road.

By enhancing liquid magnesium chloride with complex sugars, we have created a product that is ideal for dust control and stabilization on base courses with fewer plastic materials. The additional binding capabilities and deeper color of the CS blends offer a longer lasting road and an aesthetically pleasing surface.

**For use on gravel roads,  
industrial sites and haul roads.**

- Typical application rates range between .3 - .5 gals/sy
- 70/30 CS is used to increase the binding ability
- Mix the product into the base by a horizontal shaft blending machine or blade mix in a windrow
- Typical rates for stabilization are .2 gal/sy/inch followed by a topical application of .25 gal/sy
- Compact with a rubber tire roller

*Honesty, integrity, and commitment since 1964*
